About MimioStudio 8.0.1

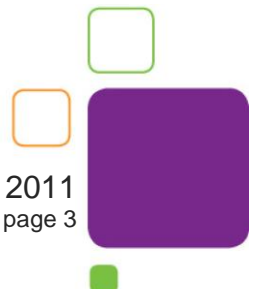

Welcome to MimioStudio™ 8.0.1 software! Version 8.0.1 is an update to the existing MimioStudio 8.0 software, which introduced the brush pen, shape recognition, free-form screen clipping, and the color picker tool. This release includes new features as well as enhancements and bug fixes related to usability, performance, and localization.

New Features and Improvements

- Additional languages** Users can now run MimioStudio software in Catalan and Basque. These two new languages are listed under the MimioStudio Settings Language menu.
- Mac 10.7 file import improvements** Support for importing PowerPoint and Microsoft Word files on Mac 10.7.
- Performance improvement** Increased performance speed when loading and reading Notebook files.

Problems Fixed

- Icons in Swedish** Swedish desktop and Program Start Group icons are now displayed properly.
- Write Anywhere for XP** Write Anywhere for XP is fixed.
- Special character handling** Corrected the behavior for handling special and international characters inside MimioVote™ question templates.
- Corrected delete feature in Gradebook in Simplified Chinese** User can now delete a class or student when using MimioStudio Gradebook in Simplified Chinese.
- Notebook maintains the hyperlink to original page** Text or objects that are hyperlinked to another MimioStudio Notebook page will remain linked to that page, even if other Notebook pages are added, moved, or deleted.
- Japanese text fixed in Recorder window** The Recorder dialog windows properly display Japanese text.
- Capturing transparent windows** Markup and screen-clipping functionality is updated to allow users to capture transparent windows.

Catch the Fly and Number Cop multimedia improvements

Fixed unexpected behavior when using Catch the Fly and Number Cop multimedia objects in Notebook.

Silent install with Microsoft SCCM

Users can now use Microsoft SCCM tool to perform a silent install of MimioStudio 8.0.1.

Translation corrections

Various translation errors have been corrected in Simplified Chinese, Hungarian, Japanese, and Swedish.

Known Issues

No support for text recognition in Basque

The text recognition feature does not support Basque language.

Automatic audio/video playback – limited support

MimioStudio will no longer support the automatic playback of any multimedia file. MimioStudio 8 will use the CODECS from multimedia programs that are already installed on the user's computer. For example, for Windows users with Windows Media Player, MimioStudio will automatically play a WMV file inside Notebook. Similarly, MimioStudio will automatically play MOV files for Mac users with the default QuickTime program installed. Linux does have a default media player for MimioStudio to leverage. Users will be alerted by a pop-up dialog box when playback is not possible.

Inconsistent behavior with color picker tool

Inconsistent behavior occurs when using the color picker tool to select a color and/or change the color of a shape.

No support for Mac 10.4 and PowerPC

Mac 10.4 and PowerPC are no longer supported in MimioStudio 8 and above. Support for these operating systems is available with MimioStudio 7.11. For previous versions please visit:

mimio.dymo.com/Support/Downloads/PreviousVersions

Running anti-virus software could impact installation

Installation of MimioStudio may be unsuccessful when anti-virus software is running. We recommend turning off anti-virus software while installing MimioStudio.

Must have administrative privileges to use auto-update

Auto-update fails if the user does not have administrative privileges. MimioStudio will attempt to update and it will appear that the update has been successful. However, the software update will fail if administrative rights are not set.

No support for keyboard tools shortcut in Mac 10.6

Shortcut keys to trigger keyboard tools are no longer supported in MimioStudio 8 on Mac 10.6 and above. Users can add the keyboard to the Mac menu bar by going into "System Preferences" → "Language and Text" → "Input Sources" tab and checking the "Keyboard and Character Viewer" input source. The icon to launch the keyboard viewer will appear on the menu bar.

Geography has been removed from the default gallery

The Geography folder has been moved to mimioconnect.com to allow users to import to their Gallery according to their preferences. This impacts new MimioStudio users only. Existing users will continue to have the Geography folder in their default Gallery.

Operating System Support

Windows

- Windows XP
- Vista
- Windows 7

Macintosh

- Mac 10.5
- Mac 10.6
- Mac 10.7
